# NOTICE

## WATER TANK OFF-LINE

On Monday July 13 between 7:00 - 8:00 AM the main line from the water tank that supplies the rest of the system will be taken out of service. The line will be out of service for a few days. This action is necessary to allow the replacement of approximately 500 feet of 8" asbestos-cement main that is located under the access road to the tank. This water main replacement must be done before work on the lower portion of the access road can be completed.

While the water tank is off-line, water will be provided by running the pump continuously, though the pressure and flow will probably be lower than normal.

On Monday morning the Irving station and Fred Hooper will not have water for a few hours. Once a valve has been added to the water line on the east side of Route 3A, service will be restored to these two properties.

Please continue to be patient as we bring these important system improvements to completion.

Thank you.

Gerard Desrochers, David Hemeon III, Gerald Weinert  
Hill Water Commissioners
